Session Resources

We are using more technology than ever. But for individuals struggling with executive functioning skills, more technology does not automatically lead to greater productivity. Let's explore an array of mobile device apps and Chrome based apps and extensions focused on providing support for organization and executive function. Areas of focus include: organization, scheduling, task completion, time management and more.

Learner Objectives:

1. Explore a range of technology tools to provide support in the area of executive function.
2. Apply at least 3 solutions to meet the unique needs of consumers with disabilities.
3. Integrate the feature match process into the selection, acquisition and implementation of AT tools to meet the needs of each individual.
